Questions:

1. **What is the purpose of the "Run" option in Query Tools, as mentioned in the paragraph?**

   Answer: The "Run" option in Query Tools is used to execute the query after selecting fields in the criteria box. It initiates the processing of the specified criteria, likely retrieving and displaying data according to the selected fields in the query.

2. **In the context of HTML elements, what does a starting and ending tag represent?**

   Answer: In HTML, an element is represented by a starting tag and an ending tag. The content to be affected by the tag is placed between these tags. For instance, the text between `<html>` and `</html>` tags describes the start and end of a web page. Similarly, `<body>` and `</body>` tags define the visible content on the page.

3. **What is the main purpose of Adobe Dreamweaver, as described in the paragraph?**

   Answer: Adobe Dreamweaver is introduced as a web design and development application. Its main purpose is to provide a visual WYSIWYG editor and a code editor for creating websites. It assists developers in utilizing technologies like CSS and JavaScript. Dreamweaver offers features such as syntax highlighting, code completion, and a visual interface for efficient web development.

4. **What view options are available in Dreamweaver, and what is the purpose of "Live view"?**

   Answer: Dreamweaver provides different views, including Design view for visual layout, Code view for hand-coding, Split Code view, and Live view. "Live view" displays a realistic representation of the document as it would appear in a browser. While not editable, it allows interaction and dynamic changes, showing the actual code executed by the browser.
