Question: **51** (Marks: 5)

Attempted Questions: **18** Total Questions: **52**

Suppose you are an HCI specialist, what do you think that evaluation of design or product is beneficial? Justify your point of view in five lines.

Answer:-

HCI specialists test design ideas on real users and use formal evaluation techniques to replace intuition in guiding design. This constant reality check improves the final product.

To most effectively develop programs and products designed to meet customer needs, all operations are strongly science based. For example, our research and development teams emphasize improving rearing methodologies for current and new products, designing consistently significant quality control evaluations, improving natural enemy delivery methodologies and developing technologies for field population monitoring. Our science-based efforts are the best means to achieve and maintain the highest standards of program and product quality.

1. Problems are fixed before the product is shipped, not after.
2. The team can concentrate on real problems, not imaginary ones.
3. Engineers code instead of debating.
4. Time to market is sharply reduced.
5. Finally, upon first release, your sales department has a rock-solid design it can sell without having to pepper their pitches with how it will all actually work in release 1.1 or 2.0.
